

Mobile Digital Driver's License (mDL)

Overview

Manual license entry slows a stop and pulls attention from the scene. With digital IDs gaining traction, agencies need tools that keep pace with new standards and protect officers in the field.

SmartMOBILE mDL scanning delivers fast, secure, contactless identity verification inside the app on an iPhone. Built to ISO-18013-5, it reduces manual input, improves situational awareness, and captures subject information for CJIS searches so officers stay focused on safety. Part of the SmartMOBILE platform built for real-world law enforcement, it works when the network doesn't.

Features

- Fast, accurate data capture; fewer typos and do-overs
- Contactless mDL scanning directly within SmartMOBILE (iOS)
- Built to ISO-18013-5 standards for secure, standards-based verification
- Reduces manual input and time on device; improves situational awareness
- Supports CJIS workflows by quickly capturing subject details on iPhone
- Data protection and field-ready performance for modern policing
- Device support: iPhone (iOS) only for mDL at launch; not supported on iPadOS; Android mDL scanning planned
- SmartMOBILE compatibility: iOS 18 requires v11.5+; minimum iOS 15; Android 16 requires v11.6+; minimum Android 13
